

CLAIMS

Therefore, having thus described the invention, at least the following is claimed:

- 1 1. An anterior cervical corpectomy plate, comprising:
2 fixing means for fixing the plate to a portion of a cervical spine; and
3 adjusting means for adjusting a length of the plate.

- 1 2. An anterior cervical corpectomy plate, comprising:
2 a fixing member for fixing the plate to a portion of a cervical spine; and
3 an adjustable member for adjusting a length of the plate.

- 1 3. An anterior cervical corpectomy plate, comprising:
2 a first plate member having a first mount and a first support member
3 extending from said first mount;
4 a second plate member having a second mount and a second support
5 member extending from said second mount;
6 wherein said first mount and said second mount are adapted to each
7 engage a vertebral body and said first support member and said second support
8 member are adapted to engage each other in an axially adjustable manner.

1 4. An anterior cervical corpectomy plate, comprising:
2 a first plate member having a first mount and a first support member
3 extending from said first mount;
4 a second plate member having a second mount and a second support
5 member extending from said second mount;
6 a plurality of apertures disposed in said first mount and said second
7 mount;
8 a plurality of screws adapted to engage said plurality of apertures, said
9 screws being adapted to fix said first mount and said second mount each to a
10 vertebral body;
11 a stop disposed on at least one of said first plate member and said second
12 plate member;
13 wherein said first support member and said second support member are
14 adapted to engage each other in an axially adjustable manner and said stop is
15 adapted to limit such axial adjustment.
